

Before and After: Cleaner Growth Path

A simple sales example showing how Search Visibility and AI Receptionist work together to turn a scattered website into a clearer path from search to lead capture.

Before VestBlock

Website is hard to understand on mobile.

Customers search, compare, and leave.

Contact form asks too little and creates bad leads.

After-hours visitors wait until morning or disappear.

Owner guesses what to fix next.

After VestBlock

Homepage and service pages show the offer, area, proof, and next step clearly.

Customer questions are answered before the visitor has to call.

Lead capture asks the right questions and routes the inquiry.

AI receptionist can respond immediately and collect details.

VestBlock gives a clear first 7 days and monthly improvement plan.

Sales takeaway

VestBlock does not just add a chatbot or write random content. The value is making the buyer journey easier to find, easier to trust, and easier to act on.
